Rule Clarification for all cars.

Page 20 of the 2018 rule book.

Existing rules listed below.

21. Radius Rods

21. (A) Radius rods, steering rods, and track locating rods will be constructed only of aluminum. Titanium and/or composite materials shall not be used.

21. (D) The definition of an axle radiusing device is as follows: an axle locating device that is fixed on the axle-end and with bearing on the chassis attaching end (for example: a wishbone).

21. (E) An axle radiusing device must be made of aluminum.

Effective Immediately all race cars including but not limited to Independent front suspension type must utilize all aluminum upper and lower control arms, radius rods, steering rods, and any other type of track locating rods.
